

A1

1. (Amended) A system for distributing program content comprising:
first means for transmitting said program content and data relating thereto using a
first network, said first network being a wireless network;

second means for receiving said program content and data relating thereto;
third means for receiving user input; and
fourth means for storing said data in response to said user input.

SCB
C1

2. (Amended) The invention of Claim 1 further including fifth means, responsive
to said stored data, for retrieving said program content or information relating thereto
from a second network.

A2

SCB
C1

6. (Amended) The invention of Claim 1 wherein said program content includes a
plurality of music selections.

A3

12. (Amended) The invention of Claim 1 further including means for selectively
displaying information relating to said data.

SCB
C1

13. (Amended) A system comprising:
a satellite radio transmitter for transmitting program content and data relating
thereto;

a receiver for receiving said program content and data relating thereto;
means for receiving user input;
a removable electronic storage medium for storing said data in response to said
user input; and

a computer, responsive to said stored data, for retrieving said program content or
information relating thereto from the Internet or World Wide Web.

AF

16. (Amended) A system comprising:

first means for transmitting program content and data relating thereto using a first network, said first network being a wireless network;

second means for receiving said program content and data relating thereto;

third means for receiving user input;

fourth means for storing said data in response to said user input; and

SG3
<1>
fifth means for selectively disabling said fourth means in response to a nonrecord-
ability signal.

17. (Amended) A method for recording data including the steps of:

transmitting program content and data relating thereto using a first network, said first network being a wireless network;

receiving said program content and data relating thereto;

receiving user input;

storing said data in response to said user input; and

retrieving said program content or information relating thereto from a second network in response to said stored signal.
